PROFILE

Front-end & mobile developer with close to three years of experience building and shipping production applications. I independently own front-end architecture, release pipelines and store deployments for apps with tens of thousands of users on Google Play, the App Store and Huawei AppGallery, with no senior supervision – while valuing the technical exchange with the client's team, which has been a real driver of my growth. Angular + Capacitor specialist, comfortable across the full stack with Next.js and Supabase, from database, auth and row-level-security design through to UI and production deployment.

EXPERIENCE

Front-End Developer (Autonomous Consultant), QiLAB | QGS s.r.l. - 12/2024 – Present
end client: Lega Nazionale Dilettanti (Italy's national amateur football federation) Firenze

- Sole front-end developer for the federation's new web and mobile digital ecosystem, delivered in full autonomy.
- Designed and built "Portale Servizi", the core management portal used by regional committees and clubs for player registration, match administration and roster configuration.
- Built "Play LND", a cross-platform mobile app (Angular 21 + Capacitor 7) released on Android, iOS and Huawei, reaching tens of thousands of users.
- Led the official store release in March 2026 and single-handedly own the Nx monorepo, build pipeline and ongoing maintenance.
- Contributed to the .NET back-end, building REST controllers and services to handle data, alongside the front-end work.
- Although working autonomously, I regularly exchanged ideas and reviewed approaches with the QGS team, which sharpened my technical decisions and kept my work aligned with the wider project.

Front-End Developer (Consultant), QiLAB | end client: QUIN s.r.l. 10/2023 – 12/2024
Firenze

- Built modern management interfaces in Angular 18+ for shop-floor operators at major manufacturers (Pietro Rosa, Safas, Inoxtech).
- Created interactive dashboards for machine monitoring and part-processing workflows.
- Integrated the front end with C# back-end services and sedApta MES systems.

Specialised Installer, Tappezzeria L.G.

01/2018 – 10/2022

- Coordinated team work and on-site supply and installation of solar shading and bioclimatic pergolas.
- Handled the company's electronic invoicing – domain knowledge I later turned into the invoicing module of the software platform below.

Follonica

Personal Project, Tappezzeria LG, Management Platform (solo, end-to-end)

04/2026 – Present

- Web back-office (Next.js + Supabase) managing clients, contacts, appointments, quotes and invoices, with electronic invoices exported as XML to the Italian Revenue Agency via Fattura24.
- Companion mobile app for field workers, including push notifications.
- Designed the database schema, authentication and row-level security; delivered from concept to production alone.
- Built solo using an AI-assisted development workflow (Claude Code), which let me deliver a full-stack product – web and mobile – at the pace of a small team.

Sesto Fiorentino

SKILLS

Front-End & Mobile

Angular (18–21), Capacitor 7, Flutter, Vue.js, TypeScript, JavaScript, HTML5, CSS/SASS, Bootstrap

Back-End & DB

Next.js, Supabase (Auth, RLS, Realtime), PostgreSQL, REST API integration (C# / sedApta), familiar with C# / .NET (REST controllers & services)

Tooling & Platforms

Git, GitLab, Azure, Nx monorepo, Android Studio, Xcode, Google Play / App Store / Huawei releases

EDUCATION

Full Stack Web Developer (intensive bootcamp, 700h, full-time),

11/2022 – 06/2023

Boolean Careers

Sesto Fiorentino

Diploma in Business Administration, Finance & Marketing,

09/2012 – 07/2017

Istituto Tecnico Leonardo Fibonacci · 2012 - 2017

Follonica
